

Installing this Presentation

For optimum viewing of the content of this presentation, you should:

1. Copy all files from the root directory provided on this CD-ROM.
2. Save the files to your hard drive.
3. Double-click on the 38333852-000_Open_Source_Solutions.html file from your hard drive to start the presentation.

If you choose to run the files from other locations, such as your CD-ROM drive or from a server, you may experience problems such as slow response times and navigational issues.

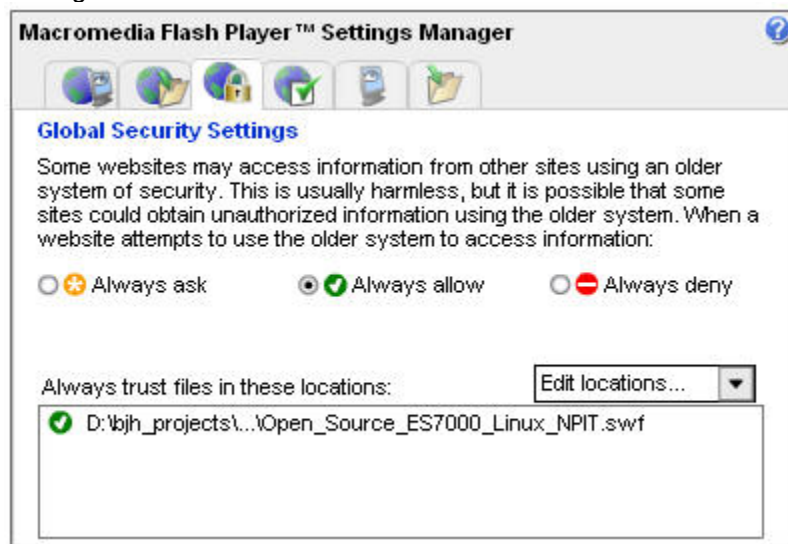

System Requirements

Your system should meet the following requirements:

- 266 Megahertz Pentium-class processor
- 64MB RAM
- 213MB of free disk space to download the files to your PC
- Video card capable of displaying 1024x768 with 16 bit color depth (suggested display setting is 1024x768)
- Windows compatible sound card with speakers or headphones
- Macromedia Shockwave Player version 6 or later. Download free from: <http://www.macromedia.com/downloads/>
- The latest Windows Media Player may be downloaded from: <http://www.microsoft.com/windows/windowsmedia/default.aspx>

Important Note About Your Browser Security Settings

Depending on your current browser security settings, you may get a Macromedia dialogue box. If so, click on SETTINGS in the message. It will take you to the Macromedia live Global Security Settings Panel:

Select ALWAYS ALLOW, and if necessary add the path of the .swf file to the locations dialogue box. You should then be able to open the Macromedia Flash presentation without difficulty.

Your browser security settings may also cause you difficulties when viewing the **Presentations (no audio)** version as they use ActiveX. You may have to click in the “warning” area of your browser window and select “Allow blocked content” in order for the web presentation to open.
